

CURRENT SUPER SYSTEM 4 TANK RANGE

Five tanks for sale – five different heights, one diameter.

Model	Code	Reel slots	35 mm	120/220	Chemistry full load	Overall height *	Retail box height	Column part
35 mm Tank	PTP114	1	1	—	290 ml	127 mm	127 mm (P)	SPTP114
Universal	PTP115	2	2	1	580 ml	171 mm	165 mm (P)	SPTP115
Multi-Reel 3	PTP116	3	3	2	1000 ml	215 mm	~210 mm *	SPTP116
Multi-Reel 5	PTP117	5	5	3	1500 ml	303 mm	294 mm (P)	SPTP117
Multi-Reel 8	PTP118	8	8	5	2500 ml	435 mm	442 mm (P)	SPTP118

SHEET INDEX

2	Tank body	PTP116	model-specific
3	Centre column	SPTP116	model-specific
4	Light-trap funnel	SPTP110	fits ALL SS4 tanks
5	Lid / EVA watertight cap	SPTP110	fits ALL SS4 tanks
6	Agitator rod (stirrer)	SPTP109	fits ALL SS4 tanks

Only the tank barrel and the centre column change length with reel count. Because each column is cut to its model's length, its head always sits directly under the funnel – which is why one short agitator rod serves the whole range, from 35 mm to MR8.

PROVENANCE – READ FIRST

Paterson publishes NO dimensional drawings or spec sheets for the Super System 4 range. Checked: patersonphotographic.com, macodirect, Parallax, B&C Camera, Unique Photo, Adorama, EMS Diasum. None list a height or a diameter.

- (P) THE ONLY HARD NUMBERS
- internal ø 95 mm (3.75 in)
 - Multi-Reel 5 internal depth 229 mm (9 in) to the funnel, 279 mm (11 in) to the lid [B&H spec Q&A]
 - box heights 127 / 165 / 294 / 442 mm for PTP114 / 115 / 117 / 118 [Amazon item details]
 - fill volumes 290 ml per 135/126 roll, 370 ml per 127, 500 ml per 120/220 [Paterson / macodirect]
 - funnel+lid kit SPTP110 fits all SS4 tanks; column +agitator kits are per-model SPTP114–118; agitator rod SPTP109 is stated to fit 35 mm through MR8 [Freestyle 142007, Firstcall PATE902, KHB PTS109]

(*) DERIVED

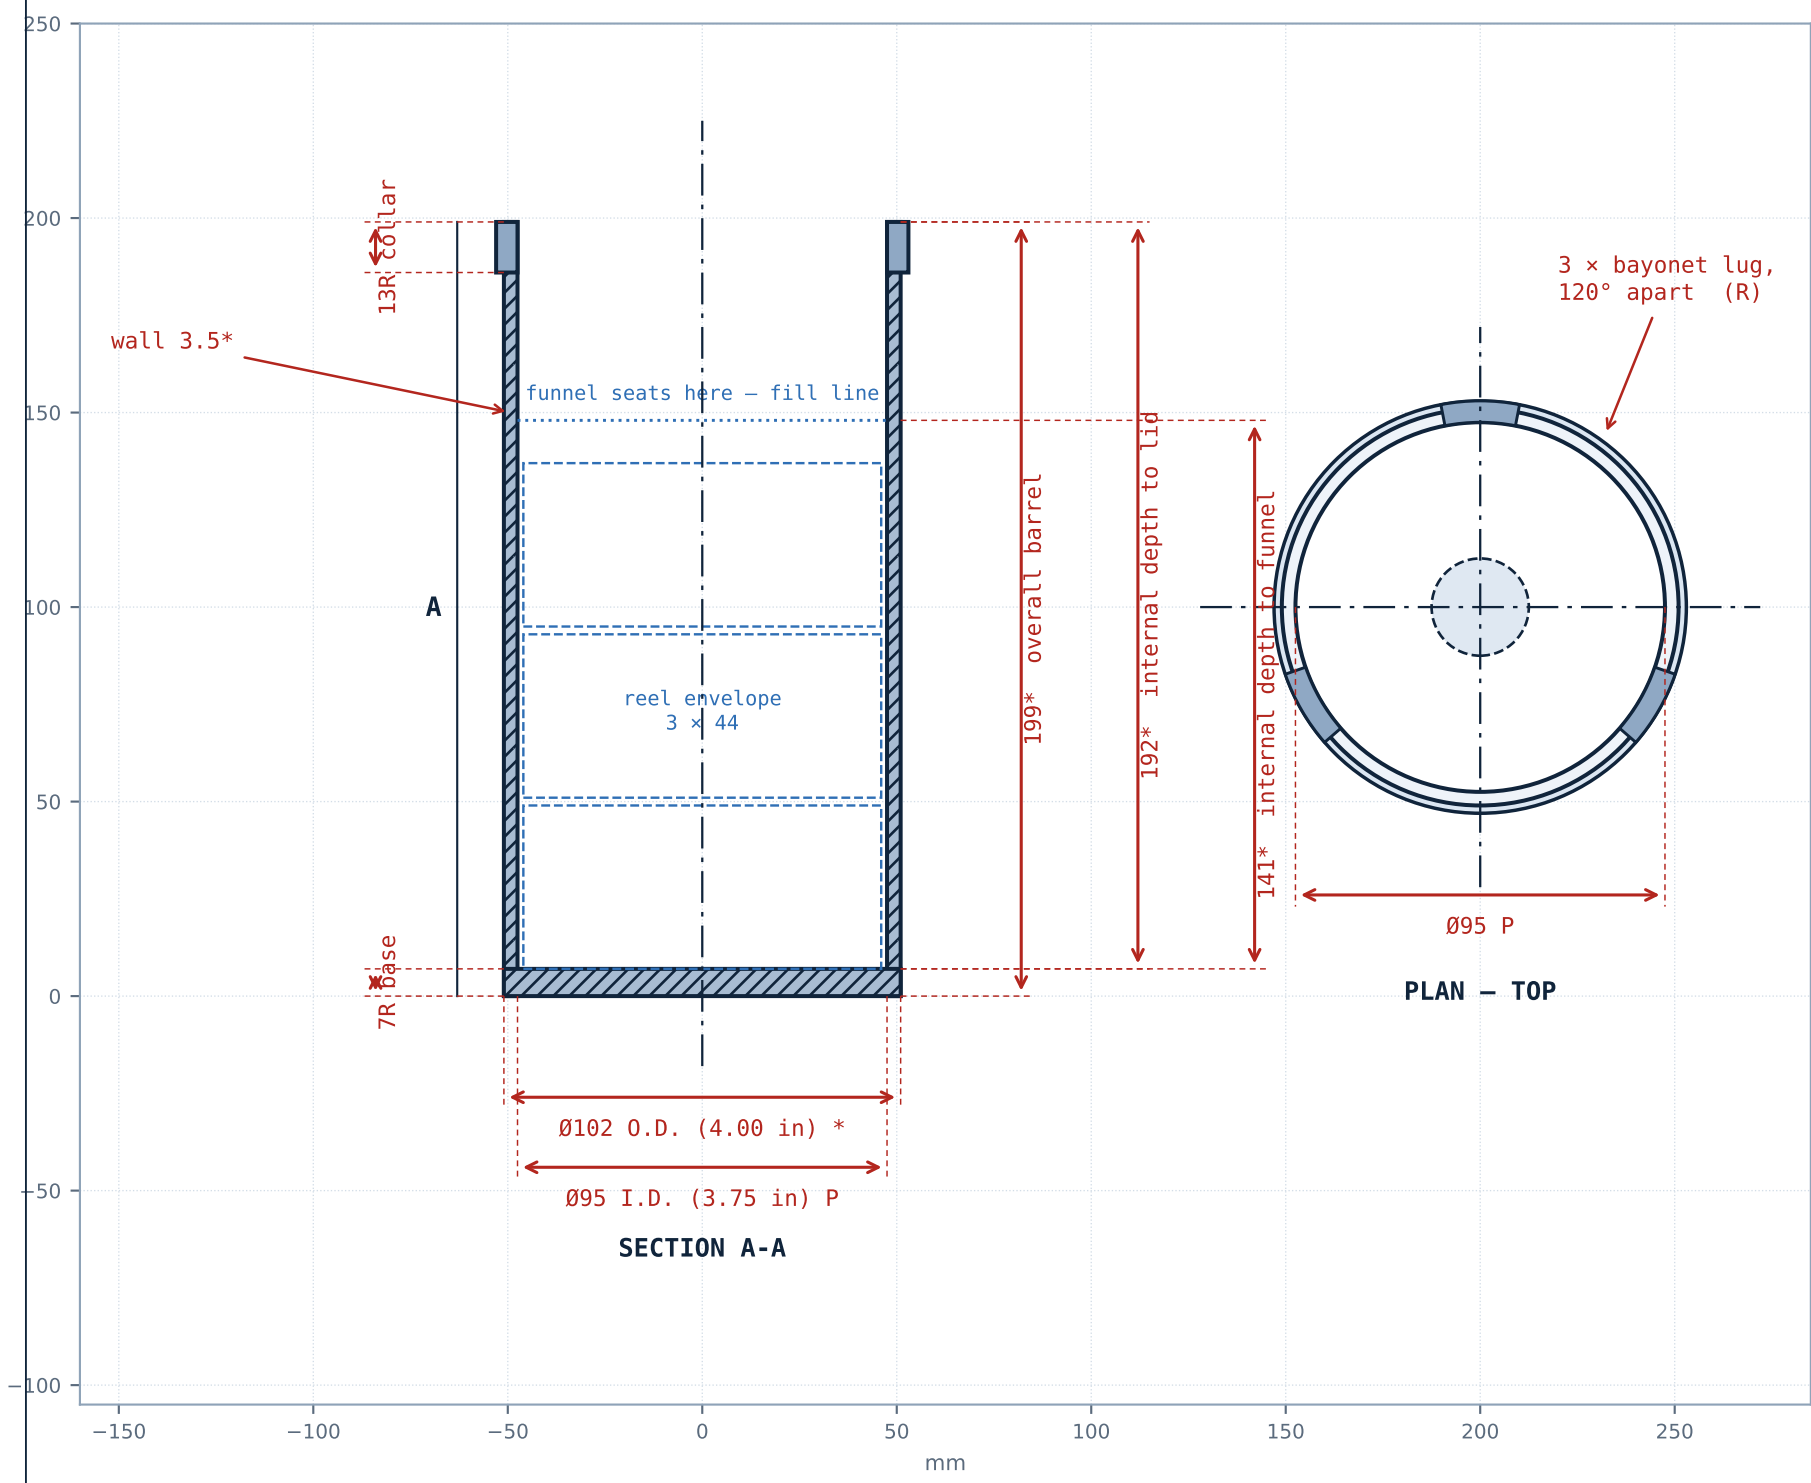

Reel pitch 44 mm = 229 mm ÷ 5 reels. Every barrel height then follows as N × 44 + 83 mm, which lands within 3 % of all four published box heights.

(R) RECONSTRUCTED

Column, funnel, cap and rod carry no published dimension of any kind. Their shapes are taken from product photography and scaled off the ø95 bore. Treat every (R) number as ±5 %.

DO NOT cut a water jacket, fixture or replacement part to these figures without checking the real tank with calipers first.

TITLE	RANGE SUMMARY
PART No.	—
FITS	Super System 4
UNITS	millimetres
SCALE	n/a
STATUS	reconstruction – verify before machining

TANK BODY – PTP116

One-piece high-impact polystyrene moulding.

BORE IS COMMON TO THE WHOLE RANGE
Ø102 outside / Ø95 inside on every Super
System 4 tank, 35 mm through Multi-Reel 8.
Only the barrel length changes.

HEIGHT RULE (derived)
barrel height = $N \times 44 + 76$ mm
overall + lid = $N \times 44 + 83$ mm
where N = number of 35 mm reel slots.

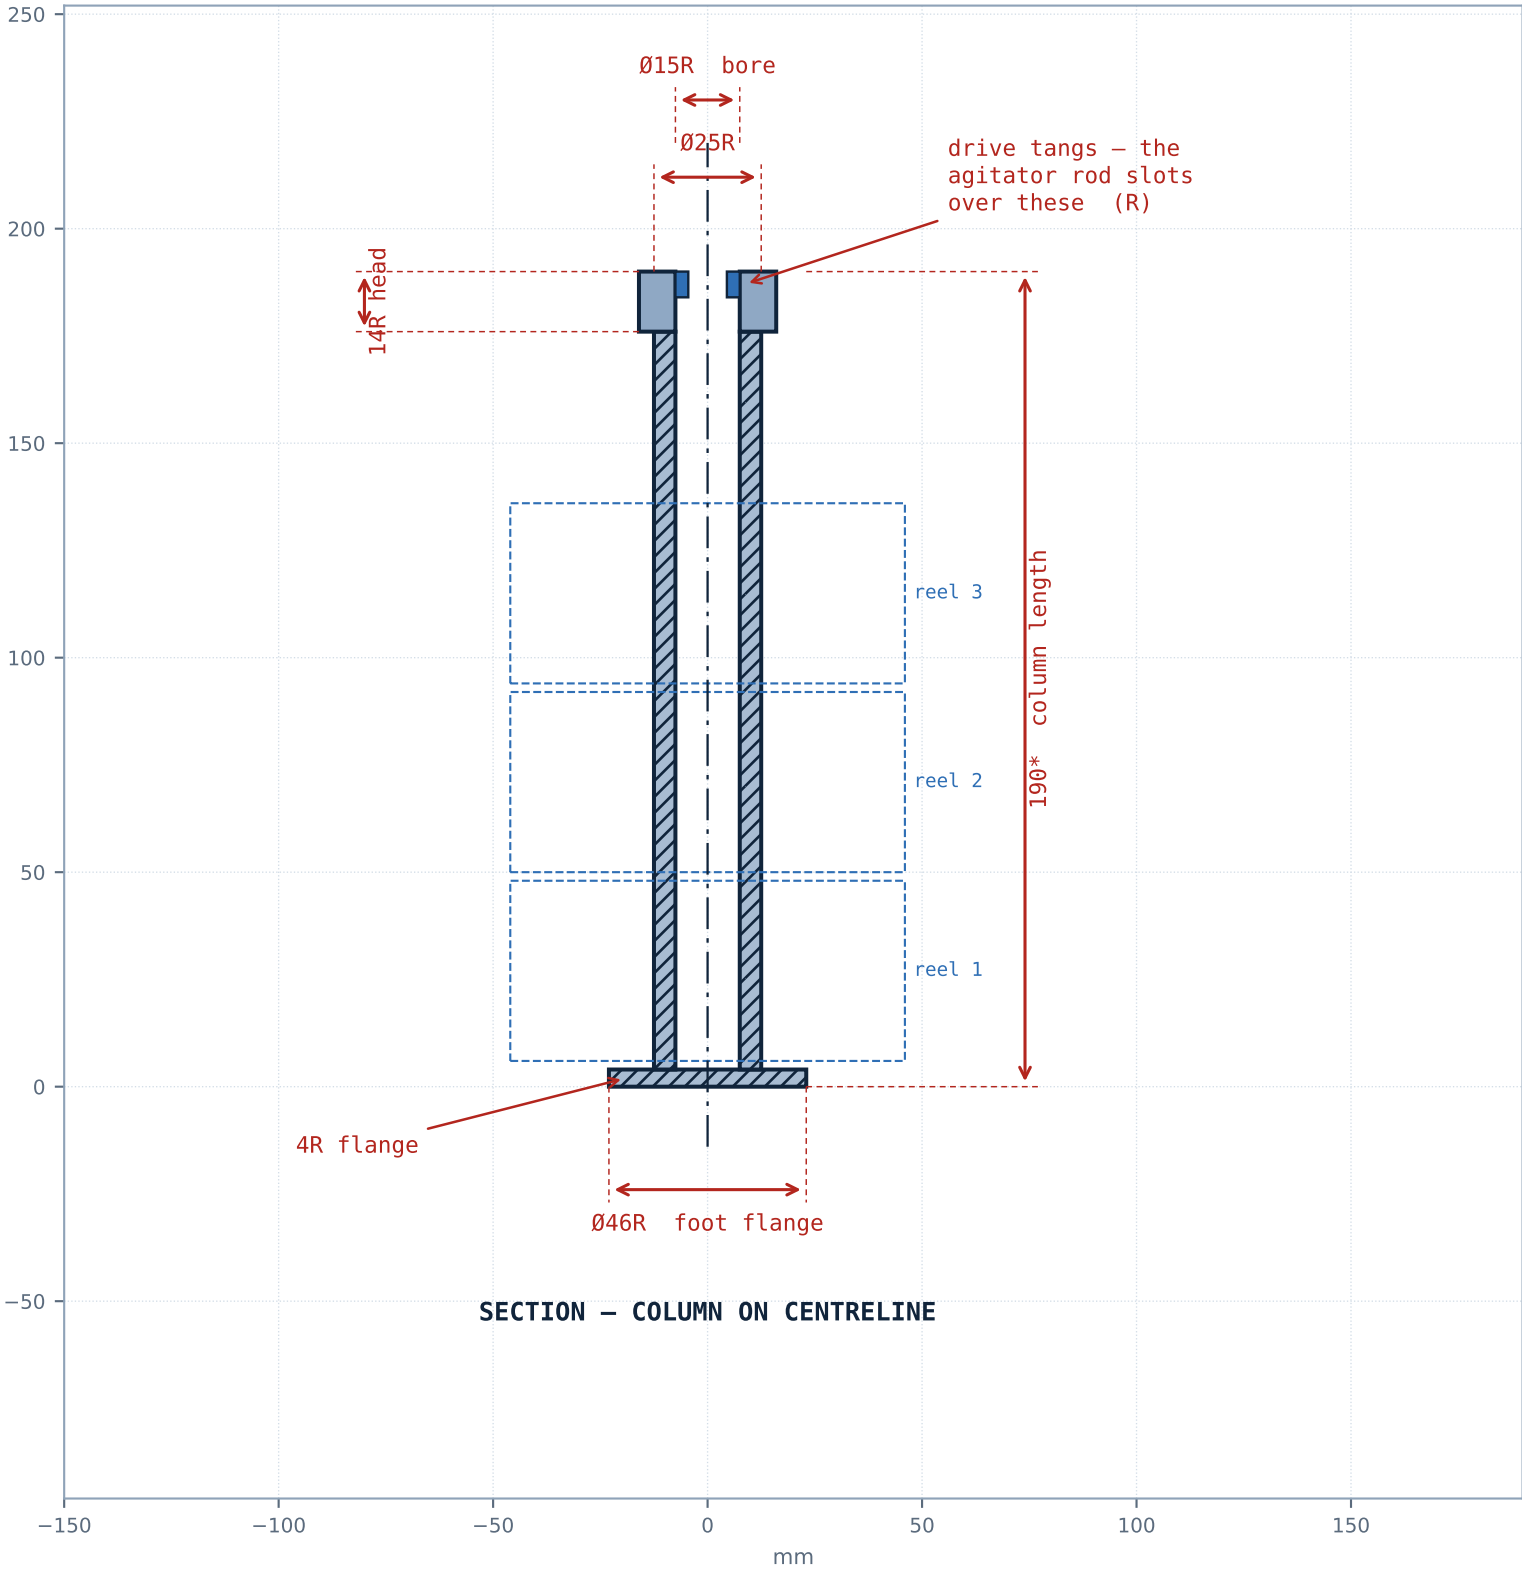

N=1	PTP114	127 mm	(box 127 P)
N=2	PTP115	171 mm	(box 165 P)
N=3	PTP116	215 mm	(box ~210 *)
N=5	PTP117	303 mm	(box 294 P)
N=8	PTP118	435 mm	(box 442 P)

CAPACITY, PTP116
 3×35 mm @ 290 ml = 870 ml
 2×120 @ 500 ml = 1000 ml
 $6 \times 4 \times 5$ in sheets in a MOD54 holder

A 120 reel occupies ~70 mm of column, so
roll-film capacity is always lower than
35 mm capacity in the same barrel.

The bayonet collar detail at the rim is (R) –
lug count and angle are read off photographs.

TITLE	TANK BODY
PART No.	PTP116
FITS	Multi-Reel 3
UNITS	millimetres
SCALE	1:2 approx
STATUS	reconstruction – verify before machining

CENTRE COLUMN – SPTP116

MODEL-SPECIFIC. Paterson sells a separate column + agitator kit for each tank, which is the clearest evidence that this is the only part besides the barrel whose length changes:

SPTP114	35 mm	SPTP117	Multi-Reel 5
SPTP115	Universal	SPTP118	Multi-Reel 8
SPTP116	Multi-Reel 3		

Reels push down over the column and are keyed to it; the head sits just clear of the funnel so the agitator rod can engage it through the throat.

DERIVED LENGTH BY MODEL ($N \times 44 + 58$)

Part	Tank	Reels	Length *
SPTP114	35 mm Tank	1	102 mm
SPTP115	Universal	2	146 mm
SPTP116	Multi-Reel 3	3	190 mm
SPTP117	Multi-Reel 5	5	278 mm
SPTP118	Multi-Reel 8	8	410 mm

Every dimension on this sheet is (R) except the length, which is (*) – it follows the same 44 mm reel pitch that reproduces all four published tank box heights. Wall thickness, flange and head geometry are read off product photographs.

LIGHT-TRAP FUNNEL – SPTP110

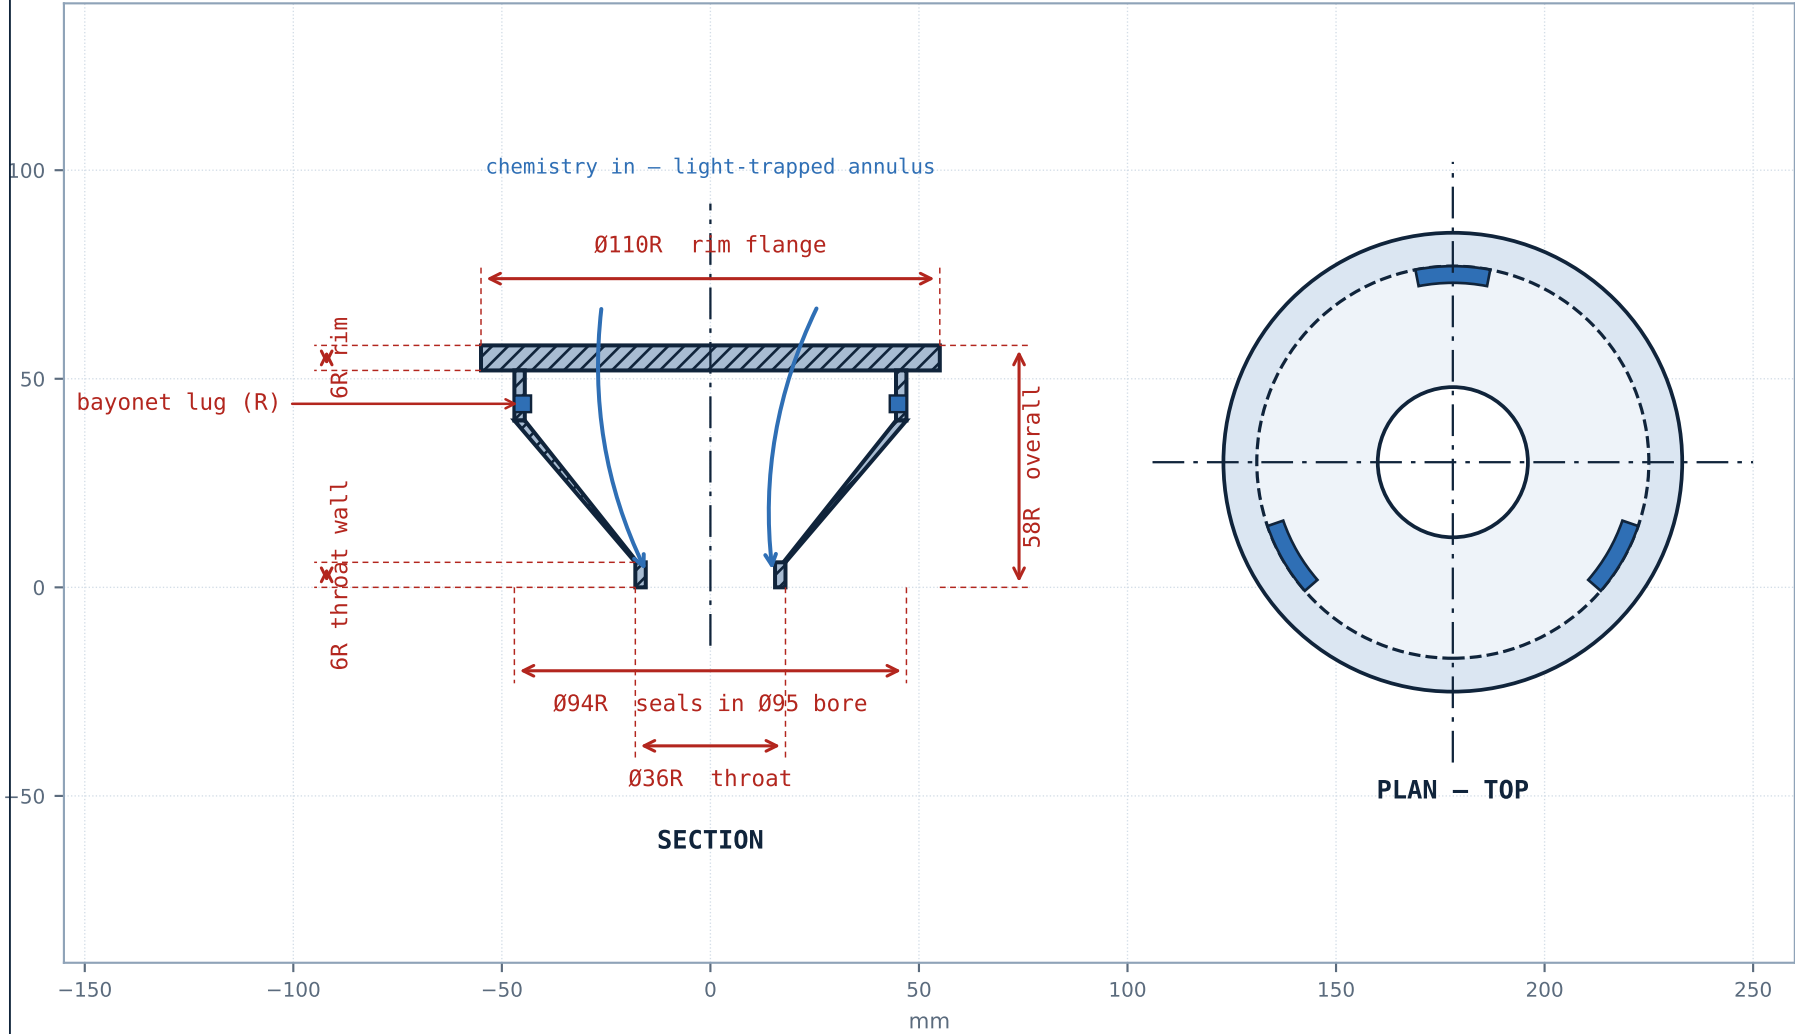

UNIVERSAL PART. Freestyle sells this as the “Super System 4 Tank Top Lid & Funnel Replacement Kit”, #142007 / Paterson SPTP110, described as fitting all Super System 4 series tanks – so one funnel covers 35 mm through Multi-Reel 8. (P)

FUNCTION
Drops over the centre column and twists clockwise onto the bayonet collar. The annular gap between the cone and the throat is the light trap: liquid passes, light does not. The tank is daylight-safe the moment it clicks home.

The one-piece large-diameter lid and funnel is the feature Paterson actually advertises – it is what makes the tank fill and empty fast. (P)

DEPTH INSIDE THE BARREL
The funnel intrudes 51 mm into the tank. That is the one funnel dimension with real evidence behind it: the Multi-Reel 5 measures 279 mm internal to the lid but only 229 mm to the funnel. (P)
 $279 - 229 = 50.8 \text{ mm}$.

All other numbers on this sheet are (R), scaled off the known Ø95 bore that the skirt seals into.

SCALE	1:1.5 approx
STATUS	reconstruction – verify before machining

LID / WATERTIGHT CAP – SPTP110

UNIVERSAL PART, supplied in the same replacement kit as the funnel (Freestyle #142007, Paterson SPTP110, “fits all Super System 4 series tanks”). (P)

MATERIAL

Flexible EVA. It is a friction cap, not a screw thread – it stretches over the funnel rim and is what makes inversion agitation possible.

TWO AGITATION MODES (P)

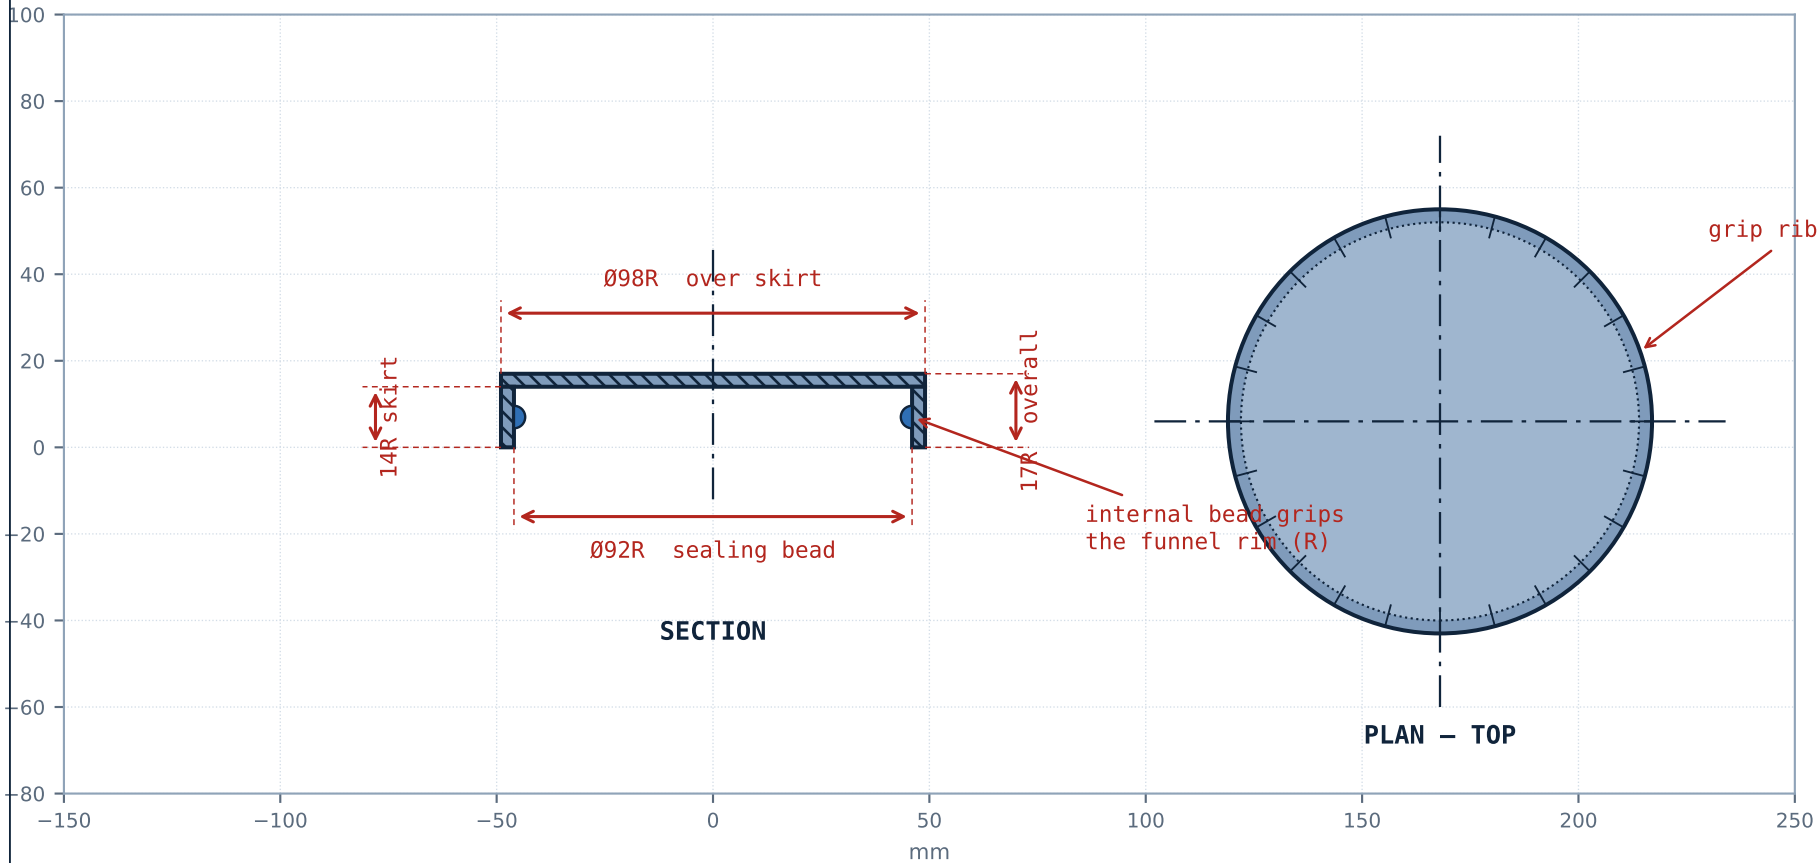

- 1 Cap fitted → invert the whole tank.
- 2 Cap removed → drop the agitator rod through the funnel throat and twist (rotary).

Paterson's own copy says either, or a combination of both, may be used.

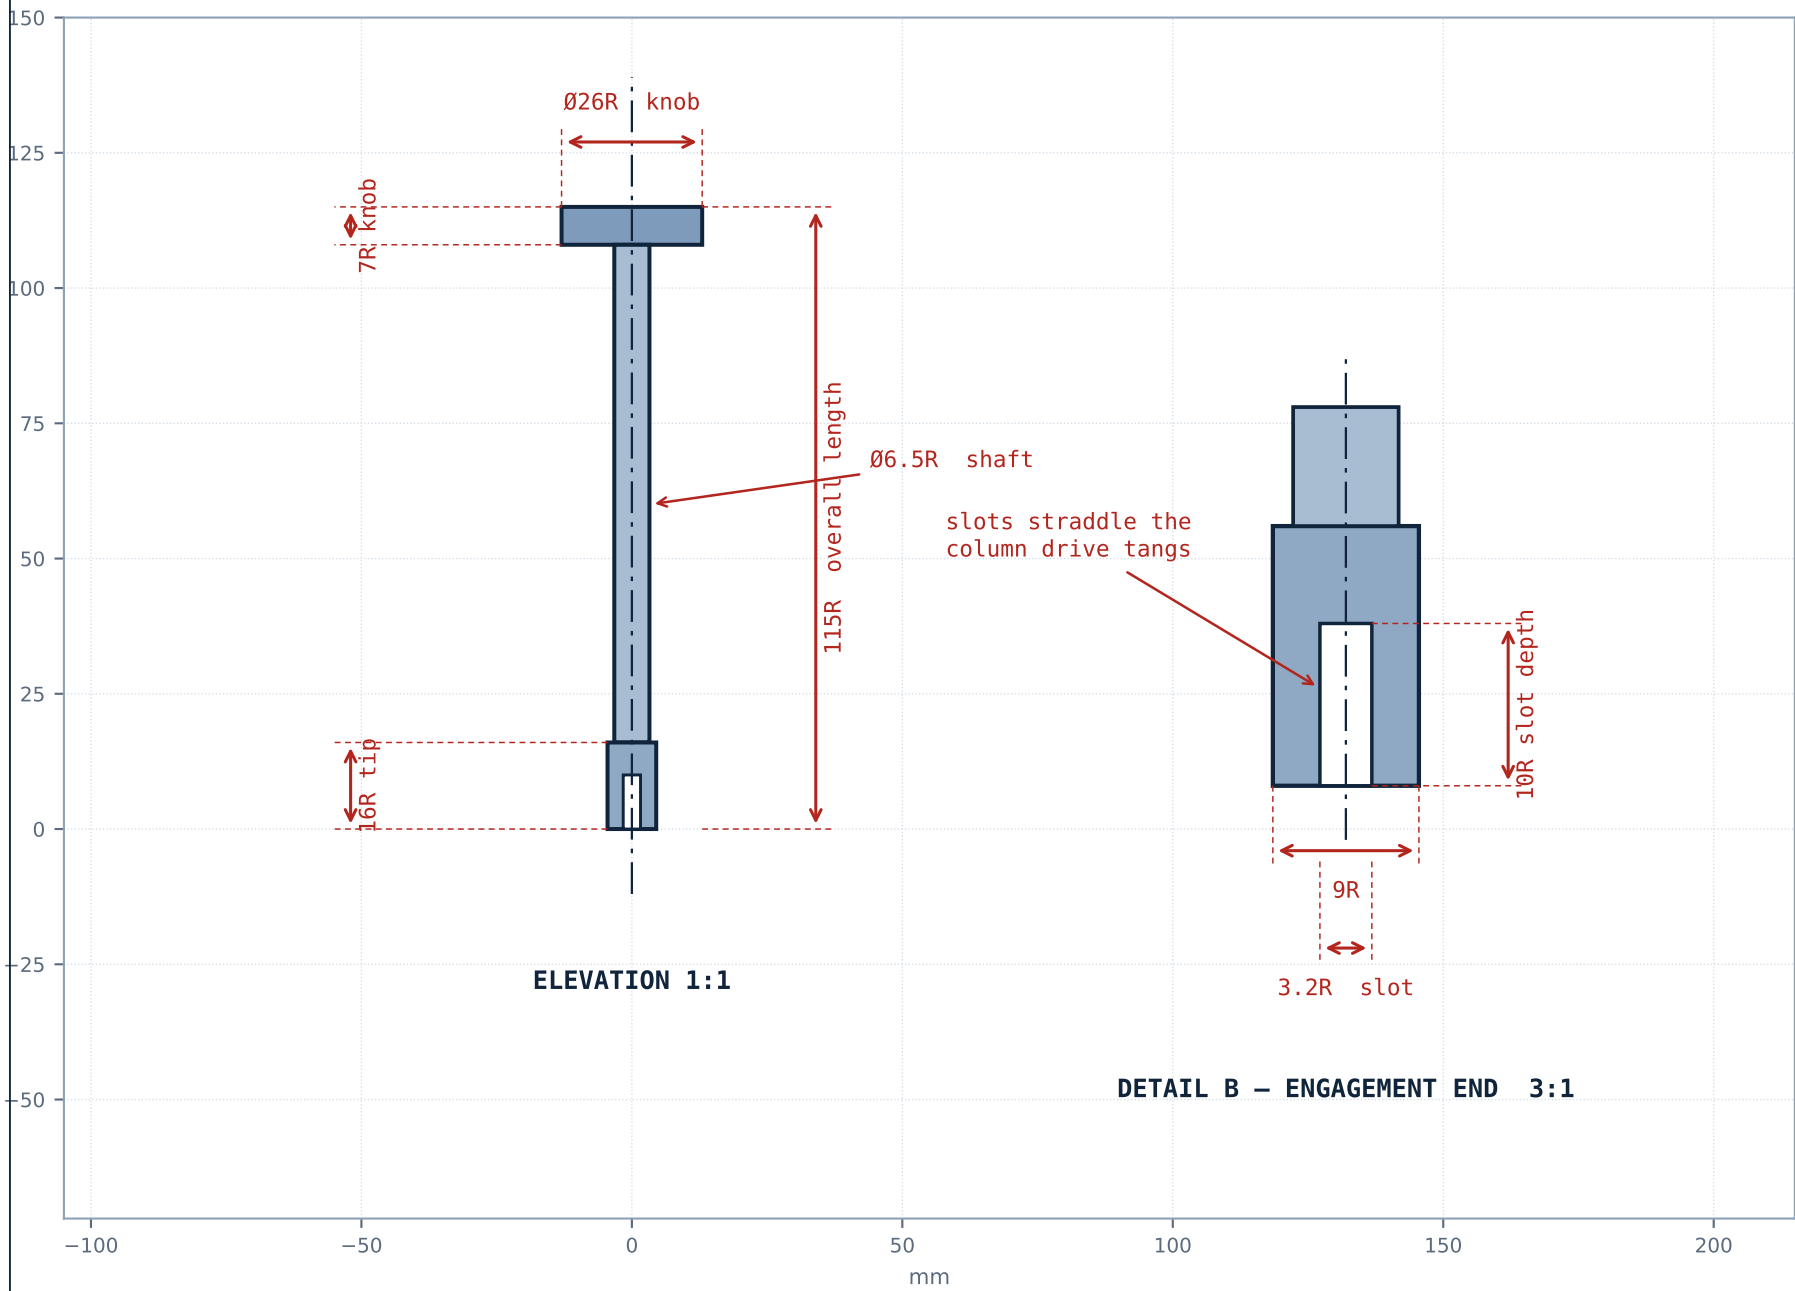

WHY IT MATTERS DIMENSIONALLY

Because the funnel is common to the whole range, so is this cap – every Super System 4 tank, from the 127 mm 35 mm tank to the 442 mm Multi-Reel 8, closes with the identical Ø98 mm cap. It is the reason a spare lid bought for one tank fits the others.

All dimensions on this sheet are (R), scaled from the funnel rim it has to seal against.

AGITATOR ROD – SPTP109

UNIVERSAL PART. The dealer copy is explicit:
“The slots in the bottom of the rod engage with the
tangs in the reel core of all Super System tanks
from 35 mm to Multi-Reel 8.”
[KHB Photographix PTS109 / Paterson SPTP109] (P)

WHY ONE SHORT ROD FITS EVERY TANK
This looks wrong at first – a Multi-Reel 8 is
3.4× the height of a 35 mm tank. It works because
the CENTRE COLUMN is the part cut to length, not
the rod. Whatever the tank, the column head ends
just below the funnel throat, so the rod only ever
has to span the funnel – about 115 mm.
That is also why Paterson sells the column and the
agitator together as a per-model kit, while the
rod alone has a single part number.

USE
Rotary agitation only. Remove the cap, drop the
rod through the throat, twist. Inversion uses the
cap instead and needs no rod.

Freestyle also list a short “swizzle stick” for
single and double reel tanks, so a second, shorter
variant is in circulation. Treat the 115 mm here
as the multi-reel length.

Every dimension on this sheet is (R).
